Instruction for Android

ID SMART BOX INTRODUCTION

Specification

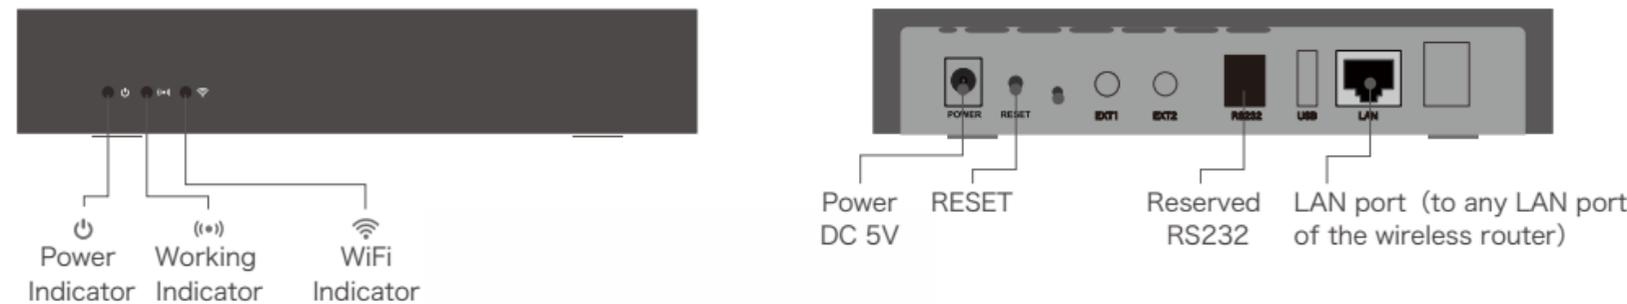

Power Voltage: DC 5V-9V
Working Current: <300mA
Standby power consumption: ≤200mA
Rated Power: <2W
Protection Class: IP40
Antenna: Built-in
Control Point Number: 30

Installation: Horizontal or wall-mounted
Wireless Communication: 433MHz, 868MHz
IEEE 802.11b/g (WIFI)
Communication Distance: 35m (Indoors)
Network Port: 1 × RJ45 (10/100 BaseT)
Working Temperature: -10°C to 55°C
Storage Temperature: -40°C to 55°C
Smart Box Size: 158mm × 83mm × 30mm

Installation Environment

The Smart Box should be installed in the central area of the residence at a height of over 50 cm above the floor. Installation may be horizontal or wall-mounted. There should be no metal objects shielding surrounding the Smart Box. Other objects should be at least 15cm away from the Smart Box. The Smart Box should be installed away from humid environments to avoid unnecessary influence on the Smart Box. A wireless router should be connected to the installation position of the Smart Box to enable access of intelligent terminals (e.g. iPhone, iPad, etc.).

ID SMART BOX HARDWARE INTERFACE

Standard Configuration

ID SMART BOX CONTROL

Smart Box Connection

1 Connect the Smart Box with adapter and then connect the power supply. Connect the LAN port of the Smart Box with the LAN Port of the home router (Note: Switch on DHCP Dynamic Host Configuration Protocol of the WI-fi router). Wait till the indication power indicator “” of the Smart Box is normal, proceed other operations.

Ordinary power socket

Adapter (Plugs for different countries optional)

Smart Box

LAN port wiring

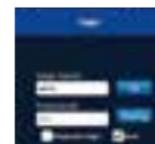

The third party router

2 Cell phone users of Android download and install id Smarthome in the website [www. Herzborg. de](http://www.Herzborg.de)

3 Connect the mobile phone to the Wifi provided by the router connected with the Smart Box by network cable. • Open idSmartHome app. Enter “admin” in user name Smart Box and “123456” in password (modification of user name and password is detailed in Page 20 of this manual). The user may save the user name and password. If auto login Smart Box is checked, the user may automatically log in by clicking the icon on the desktop. • The device ID may be automatically obtained upon successful login to facilitate remote control next time.

Software download

ADD DEVICE

Add Device

- The learning of the remote should be made within the range of 0.1-5 m to the Smart Box. After login, find the icon “

Add Room

Select “Setting” button

Click “Room Set”

Click “Add”

Click  and select room icon

Add the room successfully

In  Enter room name in name Smart Box

Add 433MHz device

Judgment of 433MHz device: Communication mode on nameplate of the device packing is 433MHz.

Select “Setting” button

Click “Device Set”

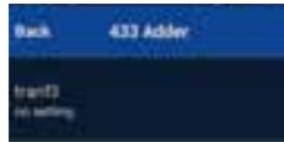

Click “ROOM1”

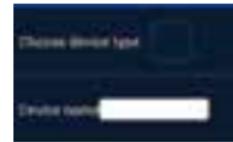

Click “433 Add”

433MHz ADD DEVICE

Click to select any one of the undefined channels

(User-defined device name. Optional device types: Roller Blinds, Venetian Blinds, Curtain, etc. Here, take roller blind for example)

Click "Next"

433MHz ADD DEVICE

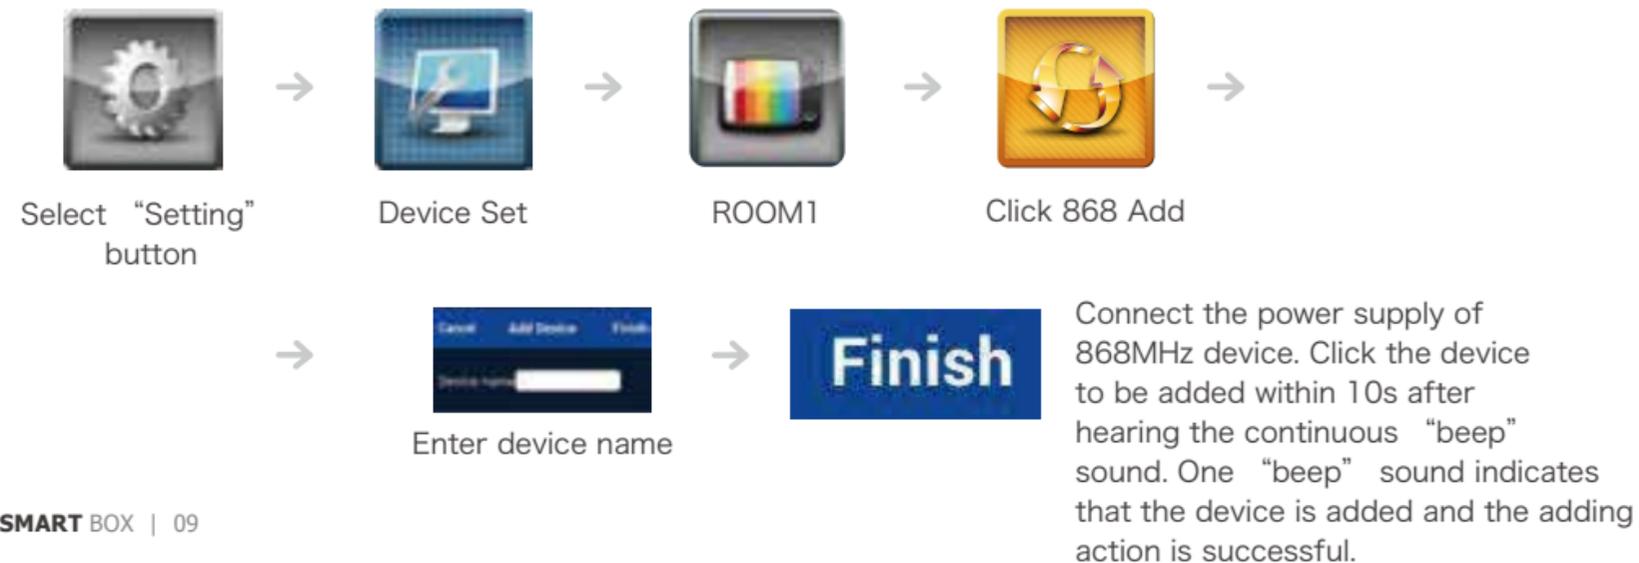

- Click learning button "  ", press and hold the "stop" button of the emitter within 10s till the hint of "Learning Success" displays (The emitter has been matched with the motor to be added)
 - After the hint of "Learning Success" displays, press "Open/Close/Stop" button respectively to test the button. If the corresponding motor may execute "Open/Close/Stop" action properly, the learning is successful. Press "  " button. Or, learn the codes again.
- Click "  ", pop "  ", and click "yes". The device is successfully added
- Learning of Multichannel Remote: Learn channel by channel

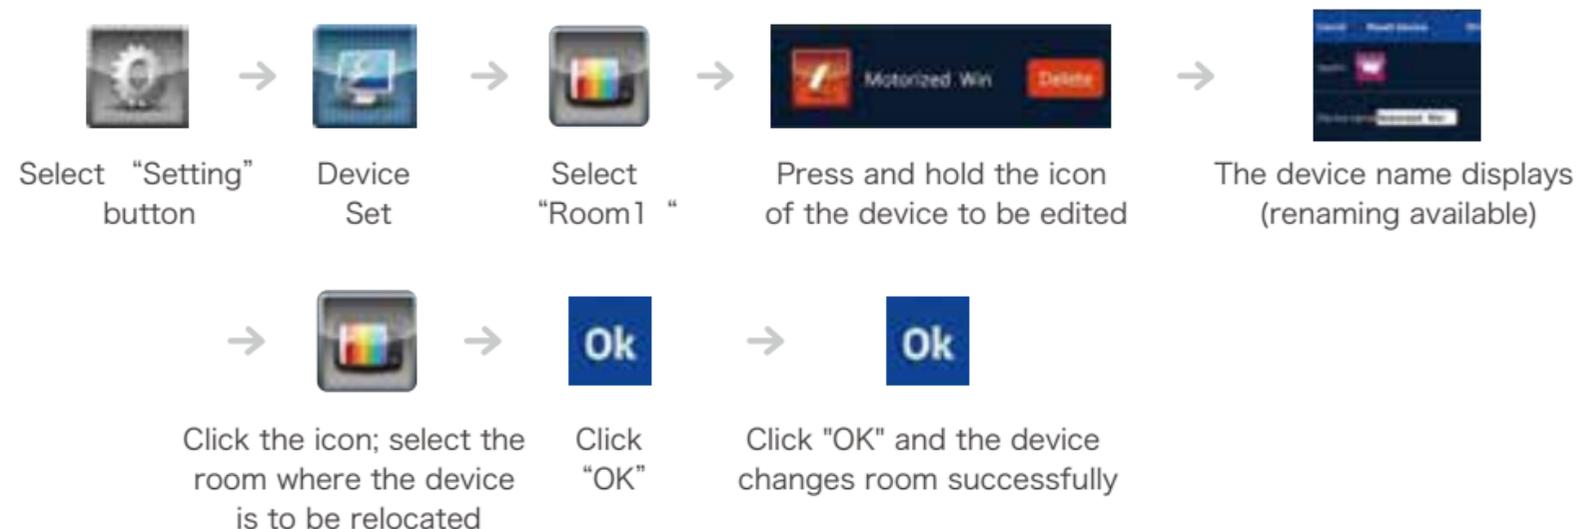

868MHz ADD DEVICE

Add 868MHz device

Judgment of 868MHz device: Communication mode on nameplate of the device packing is 868MHz.

DEVICE ROOM CHANGING OPERATION

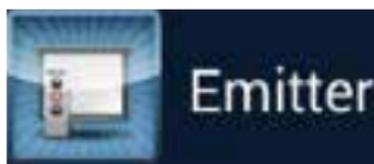

ID SMART BOX UPDATE

Add smart scene remote

Before this operation, all required scenes should be added. Please refer to P43 for scene adding methods

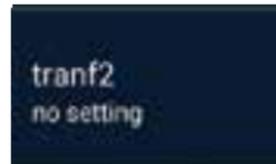

Click
"Setting"

Click "Emitter"

Click "Scene"

Select any one of the
undefined channels

Click "Dashed icon" to enter
scene selection interface
to select the scene

Click "ok"

Click "Learn" button and then
press and hold the code learning
button required on 868MHz remote

"Yes or no" will be reminded
for saving the device. Click "yes" and
setting of free pasting is completed.

SMART BOX UPDATE

Remote update of Smart Box software
Remote update via network is available.

Select "Setting"
button

Click
"About"

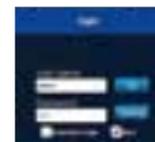

Click
"Update"

Click
"OK"

The working indicator
in the middle blinks

Return log-in interface
Update is successful

ID SMART BOX INTRODUCTION

id Smart Box

id Smart Box enables distance control and remote control functions on any wireless controlled motorized blinds and curtains by mobile phones or iPad. Controls such as opening, closing, stopping and adjustment on existing motorized blinds and curtains may be achieved by App software without affecting the normal operation of the original remotes. In addition, extended control may also be made on devices such as various wireless lights and electric apparatuses.

ID SMART BOX STRUCTURE

SETTING

Setting Interface

- Select “” icon in home page; click the icon and enter system setting interface
- System setting options: user account, host IP, host time, room set, device set, scene set, emitter and About

Add Account

- Click “” to enter “User Account” interface; click edit button “**Edit**” and then add button “**Add**”; enter “Add Account” interface; input user name and password; click “**Ok**” (“Create New” operation is only enabled for “admin” account)
- Click “**Edit**”, Click “**Delete**” to delete the user
- Click cancel button “**Cancel**” to return the “User Account” interface.

SETTING

Host IP

- Click “” to enter “Host IP” interface (modification by user not recommended)
- After editing, click OK button “” to return “Setting” interface
- Wait for 10s before making other operations

Server Time

- Click “” to enter “Time Modification” interface. Make modification and then click ok button “”
- Note: Time format is the same as that of iPhone. The 24h time system may be set on iPhone

SETTING

Room Set

Please refer to room set operation in quick installation guide part of this manual for details (P06)

Device Set

Applicable in case of newly added device set; please refer to id System Quick Installation Guide or the instruction manual of the device to be added for details (P06).

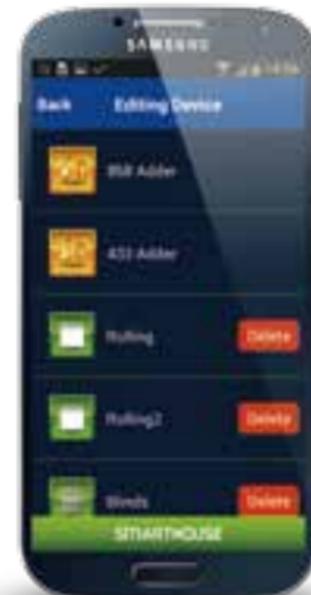

RENAME DEVICE

- Click “” on the home page to enter “Setting” interface
- Click device setting icon “” to enter device setting interface
- Click the room where the device is located
- Select and hold the device
- Enter device name the name shall not be over 15 letters ;
click ok button “” to return “Editing Device” interface
- Click “Back” to return the “Device Set” interface.
The device is successfully renamed.

REMOVE DEVICE

- Click “” on the home page to enter “Setting” interface
- Click device setting icon “” to enter device setting interface
- Click the room where the device is located
- Click device and then click “”
- Click “” and return to interface of device configuration, and the device is deleted successfully

SETTING

About (Current software version)

FOUR FUNCTIONS INTRODUCTION

01 Central Control Function

Forget the remotes of your household appliances for AC, TV, etc. and don't bother to stand up to control the lights and curtains, an iPad or a smart phone is all you need to operate any device within the Smart System within your home.

02 Scene Control Function

With the help of the easy "One-button" scene switch, you'll get rid of the embarrassment of rushing around to control different devices such as lights, motorized blinds and curtains, AC and AV devices in different areas.

For example, after you wake up in the morning, you just need to press the scene switch for "Wake-up Mode", Smart Home System will automatically open the shade curtains and window opener of the bedroom, turn off the AC system of the bedroom and turn on the light and exhaust fan of the bathroom.

03 Timer Control Function

For people living a nine-to-five lifestyle like you, a more regular life is demanded. The Timer Control Function of Smart Home System can handle many trivial things for you, for example, timed wakeup, timed congee cooking, timed opening of AC, timed opening of floor heating, etc. For example: At 7 a.m., the background music of the automatic control function plays, the soft music wakes you up from the sweet dream, the motorized blinds open gently; the lights and exhaust fan in the bathroom open; the lights in the coatroom turn on; after you get yourself washed, the congee is ready in perfect temperature;

04 Remote Control Function

For people with larger social circles like you, you would forget to turn off the household appliances when you're engaged in social activities. Or, when you get home after work, the room is sweltering. You would be sweating all over before the AC cools the room to an appropriate temperature. Smart Home System may enable you to control the household appliances in your home even if you're out.

CENTRAL CONTROL FUNCTION

Roller Blinds

- Click the curtain icon enter home page room to control the open-close state of the roller blinds (percentage-based control available depending on motor type);
- Click “**Open**”、“**Close**”、“**Stop**” button for “open”, “close” or “stop” operation.

Motorized curtains

- Press and drag the curtain slowly leftwards or rightwards to control the open-close state of the curtain (percentage-based control available depending on motor type);
- Click “**Open**”、“**Close**”、“**Stop**” button for “open”, “close” or “stop” operation.

CENTRAL CONTROL FUNCTION

Venetian Blinds

- Click device icon to control the open-close state of the venetian blinds (percentage-based control available depending on motor type);
- Click “**Open**”、“**Close**”、“**Stop**” button for “open”, “close” or “stop” operation
- Angle adjustment: Slid “” to adjust the angle of the venetian blinds

Window Opener

- Click device icon to control the open-close state of the window opener (percentage-based control available depending on motor type);
- Click “**Open**”、“**Close**”、“**Stop**” button for “open”, “close” or “stop” operation.

CENTRAL CONTROL FUNCTION

Smart Socket

Can control 220V on/off device including table lamp, coffee maker, electric cooker, heater etc.

Light

Click “” to turn on/off the lights. Drag the slider at the bottom of the device icon to dim on percentage basis. When the lighting intensity is 0%, the light is off. When the intensity is 100%, the light is the brightest (Dimming function is only available with dimming module installed)

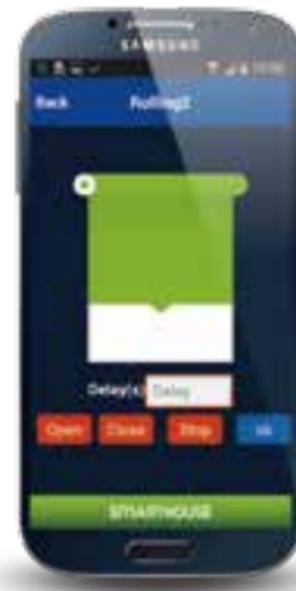

SCENE CONTROL FUNCTION

New Scene Creating

- Press setting button “” on the home page; click “” to enter scene set interface.
- Click edit button “**Edit**” and then click add button “**Add**” to enter “Add Scene” Interface.
- Click “” and select picture for the scene name the scene.
- Click “**Save**” and enter setting interface of editing scene. Click “**Add**” and enter interface of adding device. Find devices to be added in corresponding room. Click device icon, and enter interface of setting device state

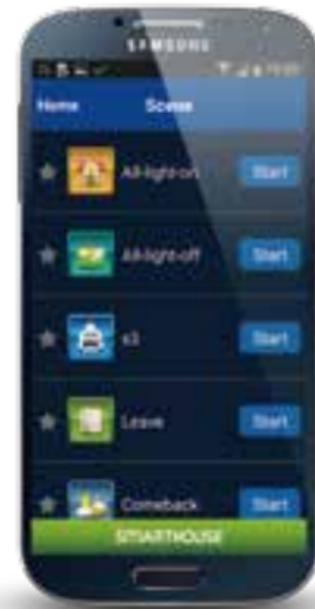

- Choose a state to be the executed state in the scene, set the state of the device as the state for example, click “**Ok**”, then the device is open when the scene is activated.
- Click “**Ok**” and the scene is successfully added

SCENE CONTROL FUNCTION

Scene Control

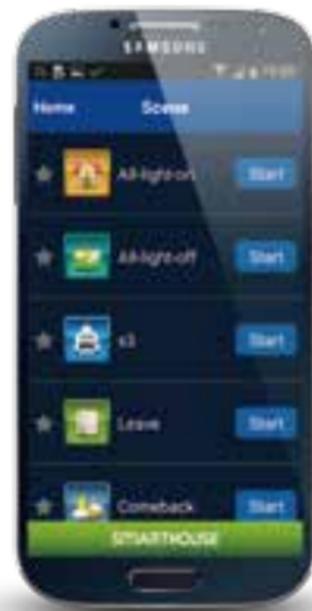

- Select “” on the home page; click to enter the “Scene Set” interface. Click start button “” to execute the scene

SCENE CONTROL FUNCTION

Scene Control

- Select “” on the home page; click to enter the “Scene Control” interface. Click start button “” to execute the scene

Scene Deletion

- Click “” button on the home page; click “” to enter “Scene set” interface
- Click the scene
- Click “” to remove the added device from the scene
- Remove all devices in the scene and then click OK button “” to enter “Scene set” interface
- Click edit button “”
